

WELLSPRING OZONE PURIFIER SYSTEM

Corona discharge ozone (O3) — automatic oxidation that reduces sanitizer demand.

WHAT IT IS

The WellSpring Ozone Purifier System creates ozone (O3) gas using corona discharge electrode technology. Ozone is one of the strongest water purifiers available — it oxidizes body oils, lotions, organics, and other impurities so your sanitizer works more effectively and lasts longer. The result: cleaner, clearer water with significantly less chemical sanitizer required.

WellSpring is Bullfrog's standard high-output ozone option. (EOS Enhanced O3 is the premium upgrade that generates up to 2x more ozone with a mixing vessel and residual gas destruct.)

HOW IT WORKS

1 GENERATE O3

Corona discharge electrode creates ozone gas from air. Runs automatically with spa filtration cycles.

2 INJECT INTO WATER

Ozone is mixed into spa water via injector / jet. Free O3 oxidizes oils, organics & contaminants.

3 OXIDIZE & SUPPORT

Ozone boosts the purifying potential of the water itself. Sanitizer residual can be maintained at lower levels.

4 FILTER EXCESS

Excess undissolved O3 gas is filtered / managed so water returns clean without corrosive residual gas.

KEY BENEFITS

Less chemical sanitizer

Ozone handles primary oxidation so chlorine/bromine residuals can stay lower — less cost, less odor.

Automatic operation

Runs with filtration cycles — hands-off oxidation support every time the spa filters.

Supports any sanitizer

Works with FROG @ease, granular chlorine, or bromine protocols as the oxidation stage.

Clearer, fresher water

Breaks down body oils, lotions, and organics that cause foam, scum, and cloudy water.

Gentler on equipment

Lower chemical load reduces wear on shells, jets, heaters, and plumbing over time.

Simple, proven tech

Corona discharge is a long-established, reliable method for spa ozone generation.

ABOUT OZONE (O3)

- Ozone = three oxygen atoms
- Powerful natural oxidizer
- Destroys organics on contact
- No lasting chemical residual
- Breaks down to plain oxygen
- Supports, does not replace, a residual sanitizer (Cl/Br)
- Part of Bullfrog's 3-stage Simplicity Total Water Care

WELLSPRING VS EOS

- WellSpring: standard CD ozone
- Reliable high-output oxidizer
- EOS Enhanced O3: premium
- Up to 2x more ozone output
- Mixing vessel for contact
- >99% residual gas destruct
- 99.9% microbe kill validated
- EOS is standard on M Series; optional on A / STIL / X Series

WHERE IT FITS

- Oxidation stage of water care
- Pairs with dual filtration
- Pairs with FROG @ease or granular chlorine / bromine
- Automatic with filter cycles
- Ask about factory options on M, A, STIL, X, and Swim Series
- Dealer can advise WellSpring vs EOS upgrade for your model
