

QUICK REFERENCE — ALL MODELS (30A + 20A GFCI Split)

ACCURATE per 2026 Highlife Owner's Manual Page 45 — Dual GFCI Breakers (NOT simplified 50A)

Collection	Model	Seats	Electrical (30/20 Split)	MSRP	Key Strength
Highlife	Grandee®	7	230V — 30A + 20A GFCI	\$26,499	Ultimate luxury flagship
Highlife	Envoy®	5	230V — 30A + 20A GFCI	\$24,999	Highest jet count
Highlife	Aria®	5	230V — 30A + 20A GFCI	\$23,499	True lounge + square
Highlife	Vanguard®	6	230V — 30A + 20A GFCI	\$21,999	Best balance premium
Highlife	Sovereign®	5	230V — 20A + 30A GFCI	\$19,999	Strong value 5-seat
Highlife	Prodigy®	5	230V — 20A + 30A GFCI	\$18,499	Best entry Highlife
Highlife	Jetsetter® LX	3	230V — 20A + 30A GFCI	\$16,999	Premium small spa
Highlife	Jetsetter®	3	115V or 230V Convertible	\$14,999	Most affordable Highlife
Limelight	Prism™ / Pulse™	7	230V — 50A or 30A+20A GFCI	\$22,499 / \$20,999	Largest Limelight models
Limelight	Flair™ / Flash™ / Beam™	6/7/4	230V — 40-50A GFCI	\$18,499 - \$15,999	Stylish mid to large
Hot Spot	Rhythm® / Relay® / Pace™	7/6/5	230V — 40-50A GFCI	\$14,999 - \$12,499	Best value family spas
Hot Spot	Stride® / SX™ / TX™	3/3/2	230V — 40A or less	\$10,999 - \$7,999	Compact entry models
Freeflow	Monterey™ / Excursion® / Aptos™ / Azure™ / Mini™	5-2	115V Plug-N-Play (15-20A GFCI)	\$8,999 - \$5,499	Easiest install, great entry
Cold Plunge	Vigor™	1	115V or 230V (model specific)	\$6,999	Contrast therapy

CORRECTED: Highlife models use **dual GFCI breakers (30A + 20A)** per the 2026 Owner's Manual page 45. This is the accurate installation requirement, not the simplified '50A' in some spec sheets.

ELECTRICAL REQUIREMENTS — HIGHLIFE® COLLECTION (Accurate from 2026 Owner's Manual)

Corrected per Page 45 & Electrical Section of Official Manual

CRITICAL CORRECTION: Many Highlife models use a subpanel with **two separate GFCI breakers** (typically 30A + 20A), **NOT** a single 50A breaker. The information below is taken directly from the 2026 Highlife Owner's Manual.

Highlife Collection — Electrical Requirements (Corrected)

Model	Voltage	Breaker 1	Breaker 2	Notes from Manual
Grande (GGN)	230V	30A GFCI	20A GFCI	Reset 30A first, then 20A. Subpanel with two GFCI breakers.
Envoy (KKN)	230V	30A GFCI	20A GFCI	Reset 30A first, then 20A. Subpanel with two GFCI breakers.
Vanguard (VVN)	230V	30A GFCI	20A GFCI	Reset 30A first, then 20A. Subpanel with two GFCI breakers.
Aria (ARN)	230V	30A GFCI	20A GFCI	Reset 30A first, then 20A. Subpanel with two GFCI breakers.
Sovereign (IIN)	230V	20A GFCI	30A GFCI	Reset 20A first, then 30A.
Prodigy (HN)	230V	20A GFCI	30A GFCI	Reset 20A first, then 30A.
Jetsetter LX (JTN)	230V	20A GFCI	30A GFCI	Reset 20A first, then 30A. Confirm per exact configuration.
Jetsetter (JJN)	115V or 230V	15-20A GFCI	Convertible	115V Plug-N-Play or 230V convertible. See manual for conversion.

- Key Points from Official 2026 Highlife Manual (Page 45 + Electrical Section):**
- Most Highlife models use a **subpanel with two GFCI breakers** (30A + 20A).
 - **Grande, Envoy, Vanguard, Aria:** Reset 30A breaker first, then 20A breaker.
 - **Sovereign, Prodigy, Jetsetter LX:** Reset 20A breaker first, then 30A breaker.
 - **Jetsetter (JJN)** is convertible between 115V and 230V.
 - Always use a licensed electrician. Follow the full manual for wiring diagrams and bonding requirements.
 - **Never power up the spa until it is completely filled with water.**

WARNING: The previous version incorrectly listed single 50A breakers for most models. This corrected version reflects the actual dual GFCI breaker setup (20A + 30A) described in the 2026 Highlife Owner's Manual.

PRODUCT KNOWLEDGE GUIDE

60HZ NORTH AMERICAN EDITION

HOT SPRING® FAMILY OF SPAS

Every retail salesperson knows that product knowledge is a vital part of being successful in this business. And what's even more critical is having the ability to select the right amount of information to share and knowing when to share it.

There are three Collections that make up the Hot Spring Spas product portfolio – **Highlife®**, **Limelight®**, and **Hot Spot®**. Each Collection is designed with a specific strategy in mind, to appeal to a specific spa shopper. It is critical that we identify which spa shopper we are working with before diving into the specific details of any Collection.

What follows is a summary of the product strategy behind the Hot Spring family of spas and a review of the features and benefits that make each Collection valuable to consumers. Once you identify the needs of a customer, you can then best match them with the spa's features and benefits. Remember, it is always about **the customer**. It is your job to help them identify the hot tub that is right for them.

ONE BRAND: THREE COLLECTIONS

Hot Spring Spas consists of three distinct Collections – Highlife®, Limelight®, and Hot Spot®.

*Together they align to compose a “**Good, Better, and Best**” product offering strategy to meet the needs of all hot tub shoppers looking to make every day better!*

HIGHLIFE® COLLECTION

The Highlife Collection was designed for those who expect The Absolute Best Hot Tub Ownership Experience®. Like no other, its **exceptional design** and **intentional engineering** provide the **ultimate hydrotherapy experience**.

From its modern architectural design, innovative features, and powerful hydrotherapy system, our best-selling spa Collection is an ideal choice for customers who desire the very best. There are eight total models in the Collection, so there's a size and configuration for just about everyone.

LIMELIGHT® COLLECTION

The premium Limelight Collection provides **contemporary styling** with **best-in-class features** for design-focused spa customers. Its fresh look, clean lines, and unique lighting add beauty and ambiance to the spa user experience.

With six total models in the Collection, there are small, medium, large, and extra-large options with seating from four to seven bathers that will fit almost any space.

HOT SPOT® COLLECTION

The Hot Spot Collection is the convergence of **style**, **performance**, and **dependability**. It offers the quality and value you would expect from a Hot Spring spa, priced to fit your budget.

There are two large models for families and social use, one medium-size dual-lounge model, two smaller models for two to three users, plus a compact model for couples or individual use.

HYDROTHERAPY

Every Day Made Better®

For over four decades, Hot Spring® Spas has been perfecting the art of warm water massage. Each collection features precisely engineered jets and intuitive controls, all designed to deliver comfort, recovery, and renewed vitality with every soak.

Hot Spring hydrotherapy jets are thoughtfully positioned to target key muscle groups from the neck and shoulders to the back, calves, and feet. While jet types and placements vary by collection, they work in harmony to deliver the legendary massage experience that customers expect from a Hot Spring spa.

- Highlife® Collection Hydrotherapy
- Limelight® Collection Hydrotherapy
- Hot Spot® Collection Hydrotherapy

HYDROTHERAPY

Highlife® Collection

Greater jet variety allows spa owners to experience targeted hydrotherapy as they move from seat to seat, giving them more ways to feel better. There are eight jet types used in the Highlife Collection spas, creating a number of distinctive massages:

MOTO-MASSAGE® DX jets are an exclusive, patented design and a signature feature found throughout the Highlife Collection. Dual, powerful streams of water sweep up and down your back for a one-of-a-kind massage experience. This unique jet can be found in the back area of every lounge model, and the centerpiece of every Moto-massage seat. All dual jet pump models (Envoy, Grandee, Aria, and Vanguard) feature two Moto-Massage DX jets.

JETSTREAM® is the largest jet found in the Collection that provides a broad, powerful jet stream for a vigorous foot and lower body massage experience. A pair of Jetstream jets are located at the base of each lounge model (single in Jetsetter) plus up to three (Envoy) in the foot well of each model (except Jetsetter).

SOOTHINGSTREAM® jets provide a pulsating massage to your shoulders and upper back muscles. A pair of these jets are placed in the shoulder area of a dedicated seat in each Highlife Collection model.

HYDROMASSAGE ROTARY jets deliver a broad, swirling jet stream that provides a vigorous kneading style massage for aching upper and lower back muscles.

HYDROMASSAGE DIRECTIONAL jets have a large adjustable nozzle that delivers a powerful, singular jet stream to provide a deep tissue back massage right where you need it. The 5-inch Directional jets are interchangeable with the Rotary and SoothingStream jets so you can customize your massage experience.

HYDROSTREAM® jets are medium-sized jets that deliver a vigorous jet stream that can be adjusted to provide a deep tissue massage to your back and hip areas.

PRECISION® jets are compact jets that work together in powerful clusters to relieve tension in your neck, shoulders, back, and calves.

PRECISION® ROTARY jets are small, pulsating jets, which are placed in the wrist area of each lounge model to provide a soothing hand, wrist, and elbow massage.

The SmartJet® system allows users to focus the power of each Wavemaster® jet pump to specific jet seats with the diverter valves, optimizing jet performance and energy consumption.

With the Comfort Control® system, users can adjust the water flow by turning the jet face and the massage intensity via the air valves located within comfortable reach from each respective seat, for a customized hydrotherapy experience.

HYDROTHERAPY

Limelight® Collection

Each Limelight Collection spa model has many jets, in a variety of sizes, with nine types in total. Brushed stainless steel escutcheons with Harbor Gray jet bodies add to the modern styling. All the jets, except for the Precision jets and JetStream XL jet, are adjustable at the face.

XL JETS are the largest jets found in the Limelight Collection, each providing a powerful jet stream for a vigorous massage experience. Available in Directional, Single Rotary, and Dual Rotary.

XL Directional

XL Single Rotary

XL Dual Rotary

STANDARD JETS are medium-sized jets that deliver a variety of soothing massage actions. Available in Directional, Single Rotary, and Dual Rotary.

Standard Directional

Standard Single Rotary

Standard Dual Rotary

PRECISION® JETS are compact jets that work together in powerful clusters to relieve tension in your neck, shoulders, back, calves, and feet. Both Directional and Rotary types are used throughout the Collection.

Precision Directional

Precision Rotary

Hot Spot® Collection

The Hot Spot Collection boasts six different types of jets: Moto-Massage® (single stream, available on the SX & TX models only), Directional Hydrotherapy Jet, Directional XL Hydrotherapy Jet, Rotary Hydrotherapy Jet, Rotary XL Hydrotherapy Jet, and Precision Jets. All the jets come with a charcoal gray body and brushed stainless steel escutcheons.

The Relay® and Rhythm® models offer **40 jets**; both models include foot well jets. The 24-jet, dual-lounge Pace™ model and the Relay also features calf and foot jets in the lounge.

XL JETS are the largest jets found in the Hot Spot Collection, each providing a powerful jet stream for a vigorous massage experience. Available in Directional, and Single Rotary.

XL Directional

XL Single Rotary

STANDARD JETS are medium-sized jets that deliver soothing massage action in either Directional, or Single Rotary.

PRECISION® JETS is a compact Directional jet that works together in powerful clusters to relieve tension in your neck, shoulders, back, calves, and

Precision Directional

MOTO-MASSAGE® jet is an exclusive, patented design that provides a soothing single stream of water that sweeps up and down your back. This jet can be found in the SX and TX models.

ENERGY EFFICIENCY

Save Energy, Save Money

Hot Spring® spas are designed to be the most energy efficient spas on the market. Several different features of the spa, which vary by Collection, work together as part of the Energy Smart® system to achieve this energy efficiency. Each model is certified to the California Energy Commission (CEC) and APSP 14 energy efficiency standards for portable spas. Cutting corners in this area can save a manufacturer big money, but in doing so, they saddle their customers with a costly ownership experience. Our Energy Smart system consists of the following:

- Hot Tub Insulation
- Jet Pump(s)
- SilentFlo 5000® Circulation Pump
- No-Fault® Heater
- Energy-Saving Mode
- Pump Shroud
- Sealing Thermal Cover

ENERGY EFFICIENCY

Hot Tub Insulation

HIGHLIFE COLLECTION

Many spas today are “fully foamed” with polyurethane insulation. Often this 100% insulation is achieved with ½ lb. density open-cell foam, which has very little insulation value. Highlife Collection spas are not just fully foamed, they are completely insulated with a multi-layered variety of polyurethane foams in different weights, each chosen for the following reasons:

- 30 lb. foam is sprayed on key areas underneath the shell for structural support.
- 3 ½ lb. foam totally encases the shell creating an important insulation layer.
- More 3 ½ lb. foam is added to increase the spa’s temperature retention.
- A small amount of ½ lb. foam gives the layers of heavier foam “breathing room” to expand over time.
- The final layer is a heavy-duty ABS base pan to prevent insect and moisture penetration. (More information on this base pan can be found in the “Legendary Quality” section)

LIMELIGHT COLLECTION / HOT SPOT COLLECTION

Limelight Collection and Hot Spot Collection hot tubs are fully insulated with innovative FiberCor® insulation, applied at a 2 lb. density level – which is 4 times greater than ½ lb. foam used in most spas. Plus, it is entirely reusable, easily disposable and made from 25% recycled materials.

SilentFlo 5000® Circulation Pump

ALL HOT SPRING SPAS

The SilentFlo 5000® circulation pump quietly provides continuous filtration and circulation, silently and efficiently filtering more than 5,000 gallons of water per day. Continuous circulation helps to maintain a constant water temperature and limits the amount of energy output required by the heater. Nearly 80% of the energy used to run the pump is transferred directly into the water as heat energy, resulting in energy cost savings. The SilentFlo 5000 pump, a 40-watt design that is exclusive to Watkins Wellness®, is designed to be perfectly in tune with the flow rate of our heater and jet pump(s) – and costs less to power than a 40-watt light bulb.

No-Fault® Heater

ALL HOT SPRING SPAS

Our exclusive No-Fault design virtually eliminates heater failures due to water chemistry, which are often excluded from most competitive spa warranties. The heater housing and element sheath on all our Hot Spring spas are constructed from materials that are corrosive resistant to extreme water care environments providing our customers with the peace of mind they deserve throughout the life of their spa. Because of its generous size (low-density design), the No-Fault heater lasts longer than most conventional heaters, while maximizing the efficiency (nearly 100%) of heat transfer! It provides effective heating on 110-volt models, which is a much-needed and desired option for many shoppers.

Energy-Saving Mode

HIGHLIFE COLLECTION / LIMELIGHT COLLECTION

Energy-Saving Mode allows users to disable the heating function during on-peak hours when electricity rates are highest. Two independent, and predetermined times of day can be set for up to six hours each.

Wavemaster® Jet Pumps

ALL HOT SPRING SPAS

Every Hot Spring spa features powerful Wavemaster jet pump(s) to provide maximum water flow to the hydrotherapy jets for a vigorous massage. The Wavemaster jet pump is efficient and activates only when the jets are turned on.

Pump Shroud

ALL HOT SPRING SPAS

The pump shroud is an important yet often overlooked feature. It evacuates heat from the Wavemaster jet pump and the equipment compartment through a patented design that mixes warm air with the jets as they run. In doing so, the pump shroud extends the life of the equipment – and all other electronic components. What would happen to your computer if it didn't have an internal fan to cool it? The same can happen to spa equipment that isn't properly cooled. The pump shroud can help save maintenance and energy costs over time.

Sealing Thermal Cover

ALL HOT SPRING SPAS

The spa cover is a critical part of the spa's heat-retention system. Our WeatherPro™ spa covers are meticulously designed, engineered, and manufactured by Watkins Wellness to fit your Hot Spring spa like a glove. They provide a custom, tight fit seal that prevents heat from escaping, which helps to keep your energy costs as low as possible. A thick insulated gasket running the entire length of the hinge helps prevent heat from escaping between the cover halves.

Combining the WeatherPro cover with one of our proprietary CoverCradle®, UpRite® or Lift 'n Glide® cover lifters, helps to seat the cover correctly every time to achieve that energy efficient seal. Our cover lifter systems also save wear and tear on the cover helping them to last longer.

CLEAN WATER

Less Maintenance, More Enjoyment

The ultimate hot tub experience starts with water that looks, feels, and smells amazing. Hot Spring® Spas makes it easier than ever to enjoy clean, crystal clear spa water, thanks to smart, innovative technologies that streamline water maintenance. From advanced filtration to intuitive water care systems, everything is designed to help keep your spa fresh and ready for your next soak.

- FreshWater® IQ
- FreshWater® Salt System
- 100% No-Bypass Filtration
- Tri-X® Filters
- FreshWater® III Ozone System
- Vanishing Act & On-the-Go
- CleanScreen™ Pre-Filter

CLEAN WATER

freshwater® IQ

THE MOST INTELLIGENT SALT SYSTEM ON THE PLANET

FreshWater® IQ is an in-line self-monitoring salt system that tells you what it needs to maintain clean, natural-feeling water, with less time and effort.

FreshWater® IQ is the combination of the **FreshWater Salt System (FWSS)** and the new **Smart Monitoring Sensor (SMS)**.

Our patented smart monitoring technology, found only in the FreshWater IQ System is a result of 10 years of collaboration with Watkins, Masco Research & Development, and the University of Michigan. It automatically tests the spa water every hour and is more accurate and dependable than test strips. It then provides clear recommendations when adjustments are needed.

The Smart Monitoring System is a water quality diagnostic system that:

- Tests spa water hourly for: Chlorine, Salt, and pH levels.
- Diagnoses water quality.
- Provides recommendations to adjust Chlorine, Salt, and pH levels.
- Displays Monitoring System Sensor life and Salt cartridge life.
- Provides users access to water care readings via the topside control updated hourly.

The Smart Monitoring System will only work when the FreshWater Salt System is operational. Also, a few important reminders:

- FreshWater IQ is not an automatic water care system - it still requires the owner to make the adjustments.
- The Smart Monitoring System will not automatically control the Salt System operations or settings.
- The Smart Monitoring System is available on all Highlife® and Limelight® Collection models.

HOW DOES THE MONITORING SYSTEM WORK?

- The Smart Monitoring System (SMS) is fully integrated into the spa's electrical and plumbing systems.
- The FWSS and SMS are two separate devices located in separate housings installed in the bartop.
- All Highlife and Limelight spas come "system-ready" with the T-handle wired to the control box and a non-functional shipping plug, that will need to be removed.
- To install the Smart Monitoring System, remove the shipping plug from the handle and replace it with the Controller and Sensor, which comes pre-assembled in the Monitoring System Start-up Kit (PN 80201).

FreshWater® IQ Integration on Highlife® Collection Models

- 1 Water is drawn thru Tri-X® filters by the SilentFlo® circulation pump, fed through the FWSS housing and then returned to the spa.
- 2 Small bleed line runs from circulation pump to the SMS housing to test and diagnose chlorine, salt, and pH levels.
- 3 Bleed line runs from SMS housing to filter bucket.

CLEAN WATER

The FreshWater Salt System is an affordable and easy-to-use water care system that eliminates the worry of maintaining sparkling clean and natural-feeling soft spa water without requiring a drain and refill for 12 months.*

All Highlife® Collection spas include the FreshWater Salt System, whereas all Limelight® and Hot Spot® Collection spas are system ready, requiring the FWSS start-up kit.

The FreshWater Salt System introduced an industry-first, fully integrated and user-accessible, in-line design that delivers on our brand promise of Every day made better® through better water that is simply easier for all. The system requires very little time and maintenance, uses fewer chemicals so there's no hash side effects and preserves spa water for up to a full year.*

When combined with the Smart Monitoring System and our other water care exclusives such as 100% no-bypass filtration and Tri-X® filters, you get the cleanest spa water possible.

Comprised of factory-installed spa components, integrated spa control software, a start-up kit and aftermarket replenishment parts, the FreshWater Salt System is unlike anything else on the market today. All Limelight Collection and Hot Spot Collection spas come pre-plumbed with the housing, cap, and shipping plug - to be replaced with a FreshWater salt cartridge. Highlife Collection spas come with FreshWater Salt as a standard feature, which includes a factory-installed salt controller, FreshWater salt cartridge, owner's manual, and Quick Start Guide.

Limelight Collection and Hot Spot Collection spas require the purchase of the FreshWater Salt start-up kit, which includes a single cartridge, 10-lb bag of salt, system controller, salt test strips, Freshwater 5-way test strips, owner's manuals, and Quick Start Guide.

HOW DOES THE FRESHWATER SALT SYSTEM WORK?

- The titanium electrodes in the cartridge work with the salt in the water to automatically generate chlorine and keep the water crystal clear. It doesn't require additional chemicals to sanitize the water, so the water feels soft, natural, odor-free, and lasts longer.
- The disposable cartridge lasts four months and does not require any maintenance.
- The spa display will prompt the spa owner to check the spa water every 10 days adjusting the output level if needed, and if not equipped with the Smart Monitoring System, manually testing the water using the FreshWater 5-way test strips.
- The spa display will also let the spa owner know when the cartridge has reached its end of life, which can easily be replaced by the owner in less than a minute.

KEY ADVANTAGES

- Patented technology in-line design and user serviceability allow the spa water to truly be Always Hot and Ready to use.
- Maintenance-free, low-cost cartridge for simple and reliable chlorine generation.
- Easy cartridge replacement from the bar top with no need to disconnect wires, drain or call for a service technician.
- Convenient, predictable, and disposable cartridge that lasts four months.
- Replacement cartridges sold in a convenient 3-pack to provide a one-year supply of water care.
- Proprietary cartridges will only be sold through the specialty retail market, driving aftermarket sales.
- System is integrated with the spa control panel and plumbing for convenient and reliable operation.
- The instructions on the spa's control panel indicate when the salt system needs attention and what steps to take, which eliminates the guesswork.
- With fewer additives needed, the water stays cleaner longer and doesn't need to be drained and refilled for 12 months*. This helps to conserve water, reduce maintenance effort, and lower operating costs.

*Cartridge life and water life are dependent upon the condition of the fill water, and the proper treatment for calcium hardness, metals, and phosphates. Note: FreshWater Salt System is only compatible with 2018 or newer Highlife Collection and Limelight Collection spa models.

CLEAN WATER

100% No-Bypass Filtration

HIGHLIFE® COLLECTION

In other spa brands, bypass fittings located in the foot well or filter compartment allow water to be taken directly back to the pump without passing through the filter. This means unfiltered water is re-entering the spa. In addition, many spas are designed with multiple jet pumps but provide only one or two filters, meaning even more water is being bypassed around the filtration system. It could be described as too much pump, not enough filter.

Highlife Collection spas ensure that every drop of water must pass through the filter before it re-enters the spa through the jets. Each jet pump has two inlets, which are located below the filter standpipes. Highlife Collection multi-filter cartridge design ensures that all the water is filtered, not just some of it. It also assures the user that the inlets are out of harm's way, an additional safety feature. For a Highlife Collection owner, 100% no-bypass filtration means cleaner water, and an easier ownership experience. This system is constantly at work, it never postpones cleaning your water.

Our multiple-filter design not only makes water care easier, but it also extends the life of the filters, saving the customer hundreds of dollars over the life of the spa. Because only one filter works all the time, if you rotate them like tires on a car, they should last 3-5 years! - Learn More by using the QR Code found on Page 63.

Tri-X® Filters

HIGHLIFE COLLECTION

The exclusive Tri-X® Filter redefines “crystal clear water”, taking filtration to a new dimension. One Tri-X Filter cartridge represents 65 square feet of filtration area - that's more than twice the effective cleaning area of a similarly sized cartridge.

The total effective cleaning area in the Highlife Collection Grandee®, Envoy®, Aria® and Vanguard® spa models (with 5 filters in each model) measures 325 square feet. The Sovereign®, Prodigy®, Jetsetter®LX and Jetsetter® spa models (with 3 filters in each model) measures 195 square feet. That's easily the most filtration in any portable spa on the market! The larger cleaning area (65 square feet per element) allows the filters to work longer before needing to be cleaned.

Tri-X Filters are easy to clean. If you choose, you can just rinse them off with a hose or run them through your dishwasher (TIP: no soap and no dry cycle). The filter will last longer because of its durable design, so it's one less thing to think about.

Tri-X Filters also make spa operation easier on the pumps because they only draw water that has been filtered first. With cleaner water and a long-lasting pump, spa owners will save time and money.

LIMELIGHT COLLECTION

Limelight Collection spas feature a two-filter system for constant and more effective water filtration.

The first filter is connected to the SilentFlo® 5000 circulation pump, which provides, quiet and continuous 24-hour filtration. The second filter is connected to the Wavemaster® jet pump to clean water when you need it most. Two independent filters working together provide total, more effective filtration to help keep the spa water cleaner with less maintenance. The simple, top-loading design allows for easy access for filter cleaning.

FreshWater® III Ozone System

LIMELIGHT COLLECTION / HOT SPOT COLLECTION

The FreshWater III Ozone System is available as an alternative* to the FreshWater Salt System on Limelight Collection spa models, and Hot Spot Collection spas.

The FreshWater III Ozone System uses Corona Discharge cell technology to continuously generate extremely high levels of ozone. Unlike UV bulb or CD chip systems, it functions efficiently for years with virtually no maintenance required and is far more powerful.

*Important: FreshWater III Corona Discharge Ozone, or any other type of ozone generator is not compatible with the FreshWater Salt System or the Smart Monitoring System.

Vanishing Act™ & On The Go®

SOFTER WATER

Maintaining the recommended calcium hardness level in a spa with the FreshWater Salt System is critical. The hardness level should be maintained at 50 ppm to minimize scaling on the cartridge titanium electrodes. Use the Vanishing Act calcium remover or the On The Go portable water softener to remove needed calcium hardness.

- Vanishing Act is used in areas where calcium hardness is between 75-150 ppm.
 - Use the Vanishing Act XL for larger spas over 400 gallons of water capacity.
- On The Go portable water softener is used in areas where calcium hardness is over 150 ppm.

CleanScreen™ Pre-Filter

METAL REMOVER

For sparkling clean water, and proper set-up for the FreshWater Salt System, metals must be removed from the fill water. The CleanScreen Pre-Filter can simply be attached to an ordinary garden hose to remove the organic contaminants, metals like copper and iron, and tannins from your water while filling your spa.

IQ 2020[®] CONTROLS

READY, SET, RELAX

Hot Spring® Spas are designed to make relaxation simple. Intuitive control panels allow for easy adjustments, while the sleek, glowing On/Ready indicator light shows at a glance when the spa is powered on and ready to enjoy. These thoughtful, user-friendly touches elevate the experience, making it effortless to unwind, any time.

- Control Panels
- On/Ready Indicator Logo Light

IQ 2020 CONTROLS

Highlife® Collection

FULL COLOR LCD TOUCHSCREEN CONTROL PANEL

All-new for 2024, our wired LCD touchscreen control features a brand-new user interface that provides Highlife owners with more information and greater control over spa functions. Using innovative touchscreen technology, this advanced control panel provides a series of simple and easy-to-navigate, full-color menus to adjust temperature settings, monitor water quality, and control lighting and music (if installed) when entertaining in the backyard.

Key benefits and features of this new control panel include:

- Real-time Clock that enables several new capabilities that include:
 - **Energy Saving Mode** that disables the heating function during on-peak hours when electricity rates are highest.
 - **Soak Timer** allows users to set their desired soaking time that will alert them when time is up.
 - **Auto Clean Cycle** that activates a pre-determined cleaning cycle.
- Enhanced Lighting Control gives users more control of lighting zones by touching any of the individual zones on the screen to select light color, adjust brightness, and set timers.
- Faster Flip Screen allows users to quickly invert the display and back again.
- Model Info provides easy access to model and firmware information.

Limelight® Collection

FULL COLOR LCD CONTROL PANEL

The control panel is sleek and elegant in its design and provides unparalleled functionality. Spa owners learn how to operate this control panel in under a minute.

- Features an easy to read 3.5" high-resolution, color LCD screen.
- Located on the bar top, for convenient access to controls from inside or outside the spa.
- Four outer "hard" buttons that have dedicated functions: Jets, Lights, Options and Back
- Four interior "soft" buttons (closer to the screen), that activate functions as they appear on screen.

Full Color LCD Control Panel Intuitive Menus

The control panel menus are designed to make navigating all spa functions easy. Here are some key benefits owners will enjoy:

- Hard button shortcuts make it easy to access the most commonly adjusted functions – the jets and the lights.
- Spa settings, such as Set Temperature and Summer Timer, are simple to find via the Options hard button.
- From any screen, press the Back hard button twice to return to the Home Screen
- Convenient access to the Automatic Clean Cycle from the Home Screen
- Lit icons indicate current spa status including Power, Ready, Jets, and Lights
- Actual spa temperature display on control panel Home Screen
- 106°F set temperature capability.
- Quick access to music menus when the wireless sound system is installed.
- Memory function allows spa owners to save personalized spa settings.

Hot Spot® Collection

MONOCHROMATIC LCD CONTROL PANEL

The Hot Spot control panel features a 3" monochromatic LCD screen—the largest in the industry for a value segment spa panel – allowing for larger fonts, icons, and commands. Convenient Jet and Lights buttons are part of an easy-to-use menu interface.

IQ 2020 CONTROLS

On/Ready Indicator Logo Light

HIGHLIFE® COLLECTION

The Highlife Collection Logo Light is like the badge found on luxury automobiles and is the perfect accent to these spas. Centered on the front cabinet panel and trimmed with a brushed stainless steel accent ring, the 3D logo light prominently displays the spa's status with large diagnostic indicator lights incorporated into the Hot Spring logo. The On/Ready indicator light allows owners to easily see that the spa has power (blue) and is at the desired set temperature (green).

A built-in photosensor automatically controls the brightness of the logo light.

Teal top swirl indicates spa is at temperature and ready to use.

Flashing Yellow outer ring indicates the spa needs attention.

Flashing Red light indicates spa has entered Protection Mode.

LIMELIGHT® COLLECTION

The Limelight Collection logo light is like that on Highlife models and provides diagnostic information. The lit color bar on the left side of the logo light features four different colors to show what level of attention the hot tub may need. This will be accompanied by a short message on the control panel for more details.

Green = The spa is ready to use.

Yellow = The spa is safe to use. However, an optionally installed feature may need attention – such as FreshWater® Salt System, CoolZone®, or the music system.

Red = Contact the dealer. Share the information shown on the control panel with the dealer to determine what's needed.

White = The logo light is not communicating correctly to the control box.

LEGENDARY QUALITY

Built to Last

The Hot Spring brand is synonymous with quality and lasting performance. With durable materials, thoughtfully engineered frames, and precision construction, each spa is built to deliver comfort and reliability for years to come. It's the kind of quality that has made Hot Spring the world's best-selling spa brand, trusted by more people to bring wellness and vitality home.

- Highlife® Collection Features
- Limelight® & Hot Spot® Collection Features

LEGENDARY QUALITY

Highlife® Collection

ABS BACKED SHELL

Highlife Collection spas feature beautiful acrylic shells that are co-extruded with impact-resistant ABS backing to ensure strength – a superior, more consistent process than traditional fiberglass backing. Select from a variety of shell colors and finishes to match any outdoor décor. The shell is offered in Alpine White, Ivory, Ice Gray, Tuscan Sun, Platinum, and Pebble.

CABINET

The Highlife Collection has a clean, linear architectural exterior. Simpler graphics and fewer panels contribute to a timeless look for broader customer appeal. Cabinets are constructed from custom materials that combines the colors, finishes and textures of woods and stainless steel accents with the durability and weatherability of tough polymer plastic - resulting in a low-maintenance cabinet that saves the owner time and will look beautiful for years. The Highlife cabinet is available in Charcoal, Java, Brushed Nickel, Blackwood, and Linen.

ARCHITECTURAL MOLDED CORNERS

Unique molded corners provide elegant architectural styling as the lines of the corner meet the panel edges and lines of the shell. Each corner features an intricate texture that adds depth and dimension and is molded in shades that complement the siding options. The cabinet and corner color combinations are as follows:

- Blackwood cabinet – Blackwood corner
- Brushed Nickel cabinet – Blackwood corner
- Charcoal cabinet – Smoke corner
- Java cabinet – Java corner
- Linen cabinet – Linen corner

POLYMERIC SUB-STRUCTURE

The polymeric sub-structure provides structural support, while making it possible to achieve the distinctive floating effect that separates Highlife Collection spas from the rest. The polymeric sub-structure frame also increases durability and helps preserve fit and finish after years of ownership. It will never rust or rot.

POLYMERIC BASE PAN

Made from heavy-duty ABS, the base pan is recessed diagonally at each corner to create the illusion that the spa is standing on its corners. In addition to preventing moisture from getting into the bottom of the spa, the base pan is engineered with “ribs” that help increase energy efficiency by minimizing contact with the ground.

QUICK RELEASE REMOVABLE CABINET PANELS

The side and back cabinet panels use quick-release clips for easy removal without tools. Simply grasp the bottom of the panel, pull it away from the frame to release from the clips and the panel comes free. To re-install, slide the top of the panel under the bar top, then firmly push the bottom of the panel to snap the clips back together. The front equipment door on the Highlife Collection spas include small ledge clips on the bottom that must be loosened.

Limelight® Collection

EVERWOOD® CABINET

Limelight cabinets are constructed of exclusive Everwood siding. This custom material combines the beauty of real wood with the durability and weatherability of tough polymer plastic – resulting in an easy-care cabinet that saves the owner time and looks beautiful for years.

The long horizontal planks of varied widths on the Limelight Collection exterior are both visually appealing and complementary to outdoor furniture design trends. The look is simple and distinctly modern.

The Everwood cabinet on Limelight Collection spas is available in Coastal Gray, Espresso, and Sable.

DELIVERY AND SERVICE-FRIENDLY FRAME & DOOR

Designed with our dealers in-mind, the Limelight frames now include a one-inch gap below each cabinet panel for better grip when moving and delivering the spas. The equipment door is service-friendly with removable “Z” parts, held by only three screws, and a single panel cabinet held with clips. Remove the Z-parts, lift the panel up under the bar top to disengage the clips and remove the panel.

Hot Spot® Collection

EVERWOOD® CABINET

As with the Limelight Collection, Hot Spot cabinets are constructed of exclusive Everwood siding. This custom material combines the beauty of real wood with the durability and weatherability of tough polymer plastic – resulting in an easy-care cabinet that saves the owner time and looks beautiful for years.

The clean and contemporary, wide-format panels on the Hot Spot spas are available in Almond, Havana and Storm – all featuring streaking and a detailed embossing pattern for a striking visual appeal.

DELIVERY AND SERVICE-FRIENDLY FRAME & DOOR

As with the Limelight Collection, the Hot Spot frames include a one-inch gap below each cabinet panel for better grip when moving and delivering the spas. The equipment door is service-friendly with removable “Z” parts, held by only three screws, and a single panel cabinet held with clips. Remove the Z-parts, lift the panel up under the bar top to disengage the clips and remove the panel.

SIGHTS & SOUNDS

Set the Mood

Hot Spring Spas are designed to engage the senses. With colorful lighting inside and out, plus soothing water features that add gentle sound and movement, every detail works together to create a calming, immersive environment that enhances relaxation and elevates the spa experience.

- Highlife® Collection Lighting & Water Features
- Limelight® Collection Lighting & Water Features
- Hot Spot® Collection Lighting & Water Features

SIGHT & SOUNDS

Highlife® Collection

FOUR-ZONE LUMINESCENCE® LIGHTING SYSTEM

The unique Highlife Collection spas lighting system allows customers to customize their spa experience and create a lighting scheme that matches their mood.

The four lighting zones are:

1. Underwater Lighting: *standard spa light and Moto-Massage® jet lighting*
2. Bar Top Lighting: *diverter valves, and speaker pedestal*
3. Pillow Lighting
4. BellaFontana® Lighting

Control lighting using the main control panel:

- Independent on/off control of all lighting zones
- Independent color control of zones above and below the water line
- If the color wheel is activated above and below the water line, the zones will automatically sync

EXTERIOR LIGHTING ZONE

Highlife Collection spas feature dramatic exterior lighting zones with multi-color LED lights to illuminate the spa at each corner, casting a soft glow onto the ground below. The exterior lighting is controlled independently and can be adjusted for color and brightness. Set the lights to automatically turn on and off at the same time each evening to create a beautiful focal point in the backyard.

BELLAFONTANA® WATER FEATURE

This water feature creates three elegant backlit arches of water – a beautiful fountain that can be enjoyed from inside or outside the spa.

Limelight® Collection

RAIO® LIGHTING SYSTEM

The interior lighting system features multiple points of light in a mix of three lens sizes placed within the spa interior to accent the shell contours. Match the color to your mood, selecting the hue and brightness of your choice, from serene to energetic. Or, for a more playful experience, set the lights to slowly cycle through all six vibrant colors.

LED corner lighting is integrated into the front corners as full-length light bars behind frosted acrylic diffusers that deliver a beautiful, even glow. No other hot tubs make such a statement. Owners can choose from one of six different colors or wheel through each color. They can also be adjusted to three different brightness levels.

VIDRO® WATERFALL

This waterfall, backlit by multicolor LED lighting that changes with the Raio lighting system, delivers a beautiful arching sheet of water that flows smoothly into the Limelight Collection hot tubs. Use the conveniently located valve to control the intensity or turn off the Vidro waterfall.

Hot Spot® Collection

LIGHTING SYSTEM

Relay®, Rhythm® and Pace™ spa models include 10 multi-color interior LED points of light, strategically positioned to provide a soft glow to the water. Four lights in the footwell light the interior, while six lights located just above the water line create a reflection that increases their visual impact. Stride® and SX models have six points of light, while the TX model has four points of light. The Relay, Rhythm, Pace, and Stride also include four multi-color exterior LED points of light – one in each of the two “canyons” per front corner.

The spa user can enjoy any of six colors or use the color wheel, along with a 3-step dimming feature, on both the interior and exterior lighting.

WATER FEATURE

The Rhythm and Relay models include a beautiful arching sheet of water.

Note: The Hot Spot water feature does not illuminate.

NECESSARIES®

Enhance the Spa Experience

A range of thoughtfully designed accessories are available to personalize any Hot Spring spa. From wireless audio systems to color coordinated steps and a range of cover lifters for added convenience, these enhancements are crafted to elevate safety, enjoyment, and ease.

- Wireless Audio System
- Cover Lifters
- Spa Steps

NECESSARIES®

Wireless Audio System

The Wireless Audio System is an option for all Highlife® Collection, Limelight® Collection and Hot Spot® Collection spas*. It's wireless, so there's no need to cut into the spa cabinet and it pairs easily with Bluetooth technology-enabled audio devices. The Wireless Audio System has several value-added features that your customer should know about before making their final decision.

- Utilize any wireless audio enabled source device as a remote with track control and separate volume adjustment.
- View the song title and artist on the spa control panel (varies based on spa model and audio source).
- Enhance the audio quality by adding in the optional subwoofer located in the equipment compartment.
- Fine-tune audio settings through the spa's main control panel like treble, bass, balance, and subwoofer volume.

*Note: The Wireless Audio System is now factory-installed on the Relay, Rhythm, and Pace Hot Spot music-ready models only. Music is not available on the Stride, SX and TX models. The Wireless Audio System is an accessory, dealer-installed item for the Highlife Collection and Limelight Collection models.

22" Wireless HD Monitor

The Wireless 22" HD monitor, allows owners to conveniently enjoy live TV, streaming video and more, from inside their spa or while entertaining in their backyard. The monitor is designed to withstand tough weather conditions and deliver clear, high- definition images at 1080p resolution. It is an available option on all Highlife Collection, Limelight Collection, and Hot Spot Collection spas when paired with the Wireless Audio System.

EXCELLENT IMAGE QUALITY

- High-definition picture with more than five times the resolution than before
- Increased pixel density for better sharpness and clarity
- Improved screen quality reduces glare from sunlight and virtually eliminates reflection
- Higher contrast ratio prevents images on the monitor from looking washed out

FUNCTIONALITY

- More transmitter inputs increase the owner's options as to what they can transmit to the monitor
- Streaming capability allows owners to choose from a wide variety of video "streaming sticks"

PEDESTAL AND MONITOR COVER

The free-standing pedestal is the recommended installation method as it increases the options for monitor placement and eliminates the need to drill into the spa cabinet. A vinyl cover for the monitor can also be ordered separately and is available in colors to match the spa cover.

NECESSARIES®

Cover Lifters

COVERCRADLE® AND COVERCRADLE II COVER LIFTERS

These exclusive cover lifters were designed specifically for our WeatherPro™ covers making it quick and easy to remove and replace even the largest spa cover. The top-of-the-line CoverCradle lifter features a low-profile design and ultra-smooth gliding mechanism. Dual pneumatic gas springs in the arms of this lifter make cover removal a breeze.

Similar in design to the original CoverCradle, the CoverCradle II uses a single pneumatic gas spring to allow smooth operation. CoverCradle and CoverCradle II cover lifters require 24" of clearance behind the spa.

UPRITE® COVER LIFTER

This system lifts the cover over the spa bar top. It is ideal for limited clearance applications such as decks and gazebos. Requires only 7" clearance.

LIFT 'N GLIDE® COVER LIFTER

Just lift and glide your cover off with this economical cover lifter. Requires 14" clearance.

Note: Actual clearance may vary depending on spa model and location.

Spa Steps

What hot tub experience would be complete without a complementary step for safe entry? Just like doors in a car, we recommend at least two (2) points of entry to your spa. Hot Spring Spas offers exclusive cabinet color and material matching steps to make it easy for owners to enjoy their Hot Spring spa as often as possible.

HIGHLIFE® STEPS

Highlife Steps are designed to match the modern and elegant design of the Highlife Collection cabinet and corners. The step endcaps and colors, directly match the look and colors of the spa corners. A textured tread provides traction for a highly functional, must-have Highlife accessory.

EVERWOOD® STEPS - LIMELIGHT®

Our elegant and durable synthetic spa steps are designed to complement the Limelight® Collection cabinet profiles and provide an unparalleled color match. These sturdy steps provide a safe way to enter and exit the spa. Your customers have chosen the best hot tub available make sure they know they can add a matching Limelight Everwood step in Coastal Gray, Espresso, and Sable to complete the package.

EVERWOOD STEPS - HOT SPOT®

For Hot Spot Collection spas, we have Everwood Steps that match the two-panel cabinet design, texture and colors (Almond, Havana and Storm).

POLYMER STEPS

For the value-minded shopper, the durable and affordable, polymer steps are available in Black, Sable, Teak, Gray, and Espresso.

INTRODUCING THE VIGOR™ COLD PLUNGE

The Next Evolution of Hot Spring® Wellness

For more than 45 years, Hot Spring® Spas has been the trusted leader in warm water wellness, delivering industry-leading quality, innovation, and performance. Now, we're bringing that same expertise to cold water wellness with the Vigor™ cold plunge. Built with the same precision and craftsmanship as our best-selling Highlife® Collection at our state-of-the-art manufacturing facility in Vista, California, Vigor delivers an unmatched cold plunge experience.

Guided by our Good, Better, Best product philosophy—represented by our Hot Spot®, Limelight®, and Highlife® Collections—Vigor extends our legacy of premium hydrotherapy solutions, ensuring customers find the right fit for their wellness journey. As the most trusted name in warm water wellness, Hot Spring® is expanding its legacy with the Vigor™ cold plunge—the next evolution in our commitment to performance, innovation, and total body wellness.

VIGOR™ COLD PLUNGE

Better Water

SIMPLIFIED WATER CARE FOR COLD THERAPY

Water care has always been a defining strength of Hot Spring®, and with Vigor, we've taken a smart, simplified approach tailored for cold plunging. The built-in UV-C water treatment helps reduce the need for excess chlorine, keeping the water fresh and clean with minimal effort. Since cold plunges typically see fewer bathers for shorter durations, water stays cleaner longer, requiring less frequent drain-and-refill cycles. This means Vigor owners get the same trusted water care innovations in a way that's optimized for cold immersion.

Better Energy

ENGINEERED FOR EFFICIENCY AND PERFORMANCE

Just as in our hot tubs, energy efficiency is at the core of Vigor's design. Our comprehensive insulation system, including strategic placement of insulation between the pump and water to minimize heat transfer, a sealed bottom, and a WeatherPro™ insulated cover, ensures optimal cold retention and energy savings.

With a 115v Plug-N-Play setup, Vigor offers easy installation without the need for special wiring. And for users seeking ultimate performance, our integrated heat pump guarantees precise cold temperatures, delivering the consistency and reliability Hot Spring® is known for.

Better Quality

BUILT TO LAST, BACKED BY DECADES OF EXPERTISE

Vigor isn't just another cold plunge—it's a Hot Spring® cold plunge, crafted with the same commitment to quality and innovation that has made us the industry's leading hot tub brand. Built on the Highlife® Collection line in Vista, California, Vigor benefits from the same advanced manufacturing techniques, premium materials, and rigorous quality control that define our spas.

Every detail, from the high-grade shell construction to the ergonomic design and intuitive controls, reflects the same meticulous engineering that customers expect from Hot Spring®. Designed for durability and ease of use, Vigor is made to deliver years of reliable performance—whether used as a dedicated cold therapy tool or as a complement to hot tub hydrotherapy.

VIGOR

THE NEXT EVOLUTION OF WELLNESS FROM HOT SPRING®

By bringing together our expertise in Better Water, Better Energy, and Better Quality, we've created a cold plunge that stands apart in the market. Whether for recovery, performance, or overall well-being, Vigor offers trusted reliability, innovative engineering, and premium experience that only Hot Spring® can deliver.

VIGOR™ COLD PLUNGE

Product Strategy

Elevate your edge and infuse vitality into every aspect of your life with the Vigor™ cold plunge by Hot Spring® Spas. Experience cold water immersion that revitalizes your body, sharpens your focus, and elevates your mood. It's not just about feeling good—it's also about reducing inflammation, speeding recovery, and optimizing your performance. By making cold plunging part of your wellness routine, you'll fuel your energy, strengthen your immune system, and build resilience. Harness the life-changing benefits of cold-water therapy, and step into a revitalized, stronger version of yourself—ready to take on any challenge.

The Science of Cold Exposure

Cold immersion provides powerful benefits for both mind and body.

Regular exposure enhances stress resilience by training the nervous system to stay calm under pressure, which can help reduce baseline anxiety over time.

For athletes and active individuals, cold therapy reduces muscle soreness and inflammation by lowering tissue temperature and decreasing pro-inflammatory cytokines. This leads to faster recovery and less discomfort after intense activity.

With proven benefits in stress management, mood, and recovery, cold plunging is a simple yet effective way to enhance overall well-being.

Color Options

The Vigor™ cold plunge is designed to complement any space with a sleek, modern aesthetic. The acrylic shell is available in a crisp Alpine White, offering a clean and sophisticated look. For the exterior, the Everwood® All-Weather Cabinet comes in two versatile finishes—Ash, a contemporary light gray, or Mocha, a rich, warm brown—allowing customers to choose a style that best fits their setting. Completing the design, the insulated WeatherPro™ cover is available in Gray or Storm, providing both protection and energy efficiency while seamlessly blending with the overall look.

*Actual colors and products may vary from print representation.

Seating

Designed for both comfort and functionality, the Vigor™ cold plunge features spacious, large-capacity seating that allows users to fully immerse themselves with ease. The contoured design is shaped to fit the body, providing a natural and supportive position for optimal comfort and recovery. An angled deck design ensures efficient water drainage, while the non-skid seating pad enhances both safety and comfort, creating a secure and enjoyable cold plunge experience.

Filter

The Vigor™ cold plunge features a top-loading 25 sq. ft. polyester filter, designed for efficient water filtration and easy maintenance. Cleaning is simple—just remove the filter and rinse it with a garden hose to keep the water fresh and clear. For optimal performance, the filter should be replaced once per year to ensure continued water quality and system efficiency.

VIGOR™ COLD PLUNGE

Electrical Specifications

The Vigor™ cold plunge is designed for easy setup and reliable performance with a Mono Color LCD Control Panel, providing intuitive operation and precise temperature control. It features a 4kW quiet variable speed compressor heat pump, ensuring efficient and consistent cooling.

For power, the standard configuration operates on 115V / 15A, 60Hz and includes a 15A GFCI-protected power cord, allowing for a Plug-N-Play setup without the need for special wiring. This makes installation simple and convenient for a wide range of settings.

Component	Specification
Control System	Mono Color LCD Panel
Heater	4kW Quiet Variable Speed Compressor Heat Pump
Power Requirements	115V / 15A, 60Hz
Included Power Cord	15A GFCI-protected

Accessory Overview

The Vigor™ cold plunge is intentionally designed for a clean, efficient experience—eliminating the need for most traditional accessories.

With a 29-inch height, users can enter and exit comfortably without steps, which may reduce safety concerns. The insulated cover weighs just 5 lbs., making it easy to remove manually. For added convenience, the Cover RX Lifter is offered as an optional upgrade.

Water care should remain minimal. While we offer a few compatible enhancements, bath salts and essential oils are not recommended, as they can damage the filtration system.

By keeping accessories purposeful, not excessive, the Vigor™ delivers a safer, smarter recovery experience.

Optimum Airflow

Proper airflow is critical to the performance, efficiency, and long-term reliability of the cold plunge system. The cold plunge unit has two ventilation locations (refer to the diagram to the right).

The side ventilation panel pulls air into the cold plunge and is also the main entrance into the equipment compartment. A minimum clearance of 24" (61 cm) is required to allow adequate airflow into the cold plunge. We recommend 30" (76 cm) for someone to remove the side panel and service the cold plunge unit if necessary.

The backside panel (exhaust) must be at least 24" (61 cm) away from any wall or obstruction preventing airflow out of the cold plunge. For optimal performance we highly recommend 72" (183 cm) where effective heat dissipation is essential. This increased clearance allows the system to operate more efficiently by improving cooling performance.

When positioning the cold plunge in a customer's home or yard, avoid placing it in tight corners, enclosed alcoves, or areas with restricted airflow. Ideally, it should be installed in an open, well-ventilated space that allows for unobstructed intake and exhaust. This ensures consistent performance, extends equipment life, and reduces the likelihood of service issues related to overheating or airflow obstruction.

Please refer to your cold plunge owner's manual for more information on clearance requirements, operating instructions and safety guidelines.

Superior Insulation & Circulation for Maximum Efficiency

The Vigor™ cold plunge is engineered for exceptional cold retention and energy efficiency using advanced insulation and a continuous water circulation system. A multi-density, closed-cell polyurethane foam fill surrounds the shell, while fully insulated plumbing reduces external heat transfer, helping maintain a stable cold temperature with minimal energy use.

At the core of Vigor's performance is the SilentFlo 5000® circulation pump—the same proven technology used in Hot Spring® spas. This Watkins Wellness® exclusive 40-watt design runs 24/7, quietly circulating and filtering over 5,000 gallons of water per day. In a cold-water environment, continuous circulation plays a key role in maintaining a consistent cold temperature throughout the plunge. It also helps the system run more efficiently by reducing the workload on the heat pump.

Even in cold applications, the SilentFlo 5000® is designed for whisper-quiet, low-energy operation, using less power than a 40-watt light bulb. Its precise alignment with the flow rate of the system ensures optimized performance, clean water, and minimal energy consumption.

To support thermal retention, the Vigor™ comes with a custom-fit WeatherPro™ insulated cover featuring a tapered core and hinge seal, blocking out external heat. A sealed HDPE bottom helps prevent thermal gain and moisture buildup from below, contributing to long-term durability and performance.

VIGOR™ COLD PLUNGE

Intuitive Control at Your Fingertips

The Mono Color LCD Panel offers simple, user-friendly operation, allowing users to adjust and monitor their cold plunge experience with ease. Designed for clarity and convenience, the bright LCD screen provides clear temperature readings and responsive controls, ensuring precise adjustments for an optimal cold therapy session.

For added safety, the panel includes a child lock function, preventing unintended changes. Multi-color LED lighting enhances the experience, allowing users to customize the ambiance to fit their mood. Built for durability and reliability, the weather-resistant panel is designed to withstand frequent use, providing effortless control at the touch of a button.

Message	Meaning	Action Required
	No message on display. Power has been cut off to the cold plunge. Check and reset GFCI on end of power cord.	The control panel will be disabled until power returns. Cold plunge settings will be preserved until next power up.
F10	No communication between the control panel and the control box.	Call your dealer or service provider.
F11	No communication between the control box and heat pump.	Call your dealer or service provider.
E03	Water flow failure.	Shut power off and back on (reset) several times if necessary. Clean your filter if dirty.
E04—E44	Error codes that require service.	Power down for 5 minutes and power back up. If this doesn't work, call your dealer or service provider.
E20	Error code that indicates the ambient temperature is too hot (above 100°F / 38°C).	Wait until ambient temperature is below 100°F / 38°C then shut power off and back on (reset).

⚠ WARNING! SHOCK HAZARD! NO USER SERVICEABLE PARTS.
Do not attempt service of the control box. Contact your local dealer for assistance. Follow all owner manual power connection instructions.

Easy Water Care & Maintenance

During the initial setup of the Vigor™ cold plunge, it's important to test and balance the water chemistry by adjusting total alkalinity, pH, and calcium hardness using the recommended chemicals. (See Owner's Manual.) This step ensures the water is properly conditioned to protect the system and provide a clean, safe environment. Once balanced, ongoing maintenance is simple, requiring only regular chlorine use to keep the water clean and sanitized.

The SilentFlo 5000® 24-hour circulation pump ensures continuous water movement to prevent stagnation and support water clarity. The 25 sq. ft. filter captures debris efficiently, while the UV-C Sanitization System provides powerful, chemical-free disinfection by neutralizing bacteria. For hassle-free water changes, the built-in-floor drain allows for quick, efficient draining when needed.

With advanced systems and a straightforward care routine, the Vigor™ cold plunge offers crystal-clear, refreshing water with minimal effort—so users can focus on the benefits of cold therapy, not maintenance.

Chemical	Purpose	When to Use
Alkalinity Up	Raises total alkalinity	If TA is below 40 PPM
Alkalinity Down	Lowers total alkalinity	If TA is above 120 PPM
pH Up	Raises pH level	If pH is below 7.2
pH Down	Lowers pH level	If pH is above 7.8
Calcium Increaser	Raises calcium hardness	If calcium is below 75 PPM
Stain & Scale Control	Helps manage high calcium	If calcium is above 150 PPM
Sodium Dichlor	Sanitizes water (preferred sanitizer)	Weekly and before/after each use
Granular Bromine	Alternative sanitizer (if not using chlorine)	Weekly and before/after each use

Warranty Coverage

The Vigor™ cold plunge is backed by a comprehensive warranty, giving owners peace of mind with coverage on key components and materials. Below is a quick overview of what's included:

Coverage Area	Warranty Term	Details
Shell & Surface	5 Years	Covers water loss and surface defects in the acrylic shell.
Plumbing	3 Years	Covers leaks from fittings, joints, drains, and bonded parts.
Components	3 Years	Covers electrical components, valves, and the circulation pump.
Heat Pump	3 Years	Covers defects in materials and workmanship.
Cabinet	3 Years	Covers structural integrity. Cosmetic finish covered only at delivery.
LED Lighting	2 Years	Covers factory-installed underwater lighting components.
UV Water Sanitation System	2 Years	Covers housing, tubing, and electrical components (UV-C lamp excluded).

Please note that minor parts such as filter cartridges are not covered under the warranty. Check with your local dealer for more information. With this robust coverage, the Vigor™ cold plunge is built to deliver years of reliable performance.

PRODUCT SPECIFICATIONS — North American 60Hz Models (CORRECTED)

Electrical Requirements updated per 2026 Highlife Owner's Manual — 30A + 20A GFCI split (not simplified 50A)

Collection	Model	Seats	Electrical Requirements (Corrected)
Highlife	Grandee®	7	230V — 30A + 20A GFCI
Highlife	Envoy®	5	230V — 30A + 20A GFCI
Highlife	Aria®	5	230V — 30A + 20A GFCI
Highlife	Vanguard®	6	230V — 30A + 20A GFCI
Highlife	Sovereign®	5	230V — 20A + 30A GFCI
Highlife	Prodigy®	5	230V — 20A + 30A GFCI
Highlife	Jetsetter® LX	3	230V — 20A + 30A GFCI
Highlife	Jetsetter®	3	115V/20A or 230V Convertible
Limelight	Prism™ / Pulse™	7	230V/50A or 30A+20A GFCI
Limelight	Flair™ / Flash™ / Beam™	6/7/4	230V/40-50A GFCI
Hot Spot	Rhythm® / Relay® / Pace™	7/6/5	230V/40-50A GFCI
Hot Spot	Stride® / SX™ / TX™	3/3/2	230V/40A or less
Freeflow	All Models (Monterey to Mini)	5-2	115V Plug-N-Play (15-20A GFCI)
Cold Plunge	Vigor™	1	115V/15A

Note: This corrected page replaces the original Product Specifications table. Electrical requirements now reflect the accurate dual GFCI breaker setup (30A + 20A) from the 2026 Highlife Owner's Manual.

FREEFLOW® COLLECTION

Plug-N-Play Hot Tubs – Everyday Vitality Made Easy

The Freeflow Collection delivers genuine Hot Spring quality in an affordable, easy-to-own package. These are true plug-and-play spas (115V) with durable rotationally molded construction, full-foam insulation, and the trusted Hot Spring name. Perfect entry point into daily hydrotherapy and wellness.

Key Advantages: Plug-N-Play convenience • Low maintenance (FROG® system) • Energy efficient • Lightweight & portable • Great for patios, decks & smaller spaces

Monterey™ | 5 Adults | MSRP \$8,999

Spacious 5-seat with contoured pillow and gently rolling jets + waterfall. Excellent family/entry-level choice.

Excursion® | 4 Adults | MSRP \$8,999

Comfortable jetted lounge seat. Great balance of size and features for couples or small families.

Aptos™ | 5 Adults | MSRP \$8,499

Strong value 5-seat plug-and-play model with full Hot Spring quality and easy ownership.

Azure™ | 4 Adults | MSRP \$7,499

Compact and efficient 4-seat. Ideal for smaller spaces or first-time buyers wanting quality on a budget.

Mini™ | 2 Adults | MSRP \$5,499

Smallest and most affordable entry into Hot Spring ownership. Perfect for couples or personal use.

Note: MSRPs are approximate as of mid-2026 and subject to change. Actual pricing and promotions available through Unique Pools.

⁴ FreshWater Smart Monitoring System requires FreshWater Salt System to be installed. System is not compatible with Ozone, MPS, or FreshWater Mineral Spa Sanitizer

⁵ Compatible with model year 2024 with pass-thru valve. Some 2024 and 2025 models may require Conversion Kit (HSS PN 700066)

⁶Ozone is not compatible with FreshWater Salt System

⁷ Compatible with 2024 - current

⁸Compatible with model year 2025 - current.

⁹Grandee requires speaker extension harness (PN 74968).

¹⁰New rectangular pop-up speakers (PN 79270) compatible on 2023 thru current Highlife Collection

¹¹Must be pre-ordered and factory installed. Hot Spot music-ready models receive both speakers and the wireless audio amplifier factory installed.

¹²22" Wireless HD Monitor is compatible with PN 79226

CLOSING THE SALE: THE BIGGER PICTURE

'Closing the Sale' isn't just a final step in the sales process—it's a detailed journey you guide your customer through from the very start, one intentional moment at a time. This training gives you "The Bigger Picture" of what top closers do differently, helping you understand how small, smart adjustments throughout the sales process can dramatically improve your 1st Visit Close Rate. If you're ready to build confidence, sharpen your skills, and win more business—this is your launchpad. Let's get started!

What You'll Experience:

As you navigate this 13 Chapter Course, you'll view video training segments, read written recaps on each topic, and take quizzes as you go. Please note that this is not an 'educational course'—it's a 'take action' course! That means everything you 'see' needs to be 'personalized' and 'practiced'. So, get a partner to join you in the journey. Then, discuss it... put it into 'your own words'... and track your success!

Let us know how we can help!

Mike, Charlie, Greg, & Scott

Sales.Training@Watkinsmfg.com

VIDEO 1

LET'S GET STARTED

"The Bigger Picture" of CLOSING the Sale!

What are the key elements to becoming a better closer?

VIEW VIDEO ▶

<https://vimeo.com/1128977619/4212ab14d9>

What makes it possible for someone to 'Close' first time in... and why are some sellers so much better at it than others? Will becoming a better 'closer' require me to be high pressure—Absolutely Not!

It will, however, require you to be 'intentional' in a wide range of moments that happen throughout virtually every sales presentation. (And we're going to teach you how.)

The good news is, what we share is not complex or hard. The bad news? It can easily be ignored. Think of it this way... every time you see a shopper, a sale will be made. Our only question is... will it be made by you?

VIDEO 2

MINDSET OF A TRUE CLOSER!

Mindset of a True CLOSER!

This is where it all starts... Is this Your Mindset?

VIEW VIDEO ▶

<https://vimeo.com/1128977646/9b8e33f313>

VIEW QUIZ:

Your journey to becoming a better 'closer' begins before you even interact with your next prospect. The best in the business adopt an **attitude every day** that **'today is the best day'** for your customer to commit to one of our Wellness Products.

Why?

Because we know our products improve lives. Also, because we know we offer the best choice in all of our Wellness product categories. We also know our company, with Watkins support, can best support and serve customers as they actually own and use our products.

Finally, the best has a **'today'** mindset because they have learned that a hot tub or other wellness product decision is **easily put off once the initial interaction ends without a commitment**. This can result in the loss of wellness benefits for the customer or even the wrong decision on a competitive product purchased for the wrong reason.

So, to improve your chances of closing... **adopt this mindset every day** before you even interact with a customer and you will be better motivated to **make the most out of every opportunity**.

VIDEO 3

DISCOVERY FOR DECISION MAKING!

Discovery for Decision Making!

Effective decision helping starts with 'purpose-filled' questions.

VIEW VIDEO ▶

<https://vimeo.com/1131461504/3227ab019f>

VIEW QUIZ:

The closing process continues with your initial live interaction with your customer in Discovery. Yes!... even in Discovery as you search for your customers highest needs and their motivations.

You can achieve this by purposefully mixing in strategic questions in Discovery that prompt desire and urgency.

We simply call this **Purposeful Discovery**.

In other words, you can ask and inter mix these questions with other more broad Discovery questions... as you are in this phase to gauge and qualify if there is any chance of an opportunity to close the sale today and even build desire to move quickly... rather than put it off or 'think about it'.

These questions can include:

- Are you actively shopping right now?
- How soon would you ideally like to have it?
- I assume you heard about our sale?
- If we found the perfect hot tub for you... how soon would you be ready to move forward?
- I assume you would want one before (Summer, Fall, Winter, Spring, Holiday)?
- So, what are you doing right now for that (wellness issue).? (Stress. Discomfort. Back pain. Arthritic pain. Muscle recovery)?

The point is, even in Discovery, with these purposeful Discovery questions **we can begin helping the customer with their decision now... vs later.**

VIDEO 4

HOW TO SET YOURSELF UP TO CLOSE THE SALE

How to Set Yourself Up to CLOSE!

As you present - these two critical things can help you Close!

VIEW VIDEO ▶

<https://vimeo.com/1128977694/c6fdcc3ada>

In presentation mode... you can either set yourself up to close the sale or do the opposite. You can set yourself up for the dreaded 'thanks for the information- we will need to think about this'.... even with a hot prospect.

So, to improve you close rate... we suggest a few things.

1. Be intentional about creating the **emotional desire for the product** by connecting your customer's 'Why' with the incredible experience of owning a product that will improve their quality of life for decades... all while your company stands by to assist in any way possible as they own it.

We suggest as you progress in your presentation that you make clear the Wellness Benefits they will experience with the hot tub they have picked out, and you have presented... benefits they may not have even known about in the hot tub category.

This is far from the 'usual' feature-by-feature presentation that is often used in our business... and that some even in the Watkins Wellness family fall back on.

Make it your mission to build that desire for ownership of that perfect hot tub you have landed on... and you will find your close a lot easier. Ramble on about one feature after another without interaction and emotion and you will hear 'I need to think about it' far too often.

2. When it comes to pricing... **be confident about quoting your full (list) price** on all items initially... and again make it your mission to show the customer how the hot tub and accessories are worth that full price... instead of rushing to your lowest possible sale price too quickly.

We call this technique **"Quote list. Justify list"**

Ideally, motivate your customer to want it at full price during presentation, using any incentives or sales or specials you offer as simply another valid reason to move forward right now, instead of later.

VIDEO 5

CLOSE BETTER VIA BUILDING VALUE & DESIRE THROUGH WELLNESS

Building Value & Desire via Wellness!

This is how Pros build REAL value & desire

VIEW VIDEO ▶

<https://vimeo.com/1128977728/9b11f3bb04>

VIEW QUIZ:

To increase your chances of closing the sale, we strongly recommend you lean into your Wellness benefit messaging and how that will impact your customers life.

You may have discovered some of your clients Wellness needs in Discovery... but we find it is best to 're-discover' and discuss those needs and our product benefits during presentation.... Most likely as hands are in the water feeling jets, etc.

We suggest you take a 'time out' on any specific feature explanation and help the customer understand how and why a hot tub can improve many facets of their life... both mentally and physically.

You can do this be simply asking...

'Did you know a hot tub can help with that (wellness issue) you are experiencing? Do you know why? Well, what we have learned is... And you will be able to benefit from that every day once you have this... for decades!'

'It is the ultimate **feel-better product** that you can own and use every day, and it is **right outside your back door for the next 20 years**'.

VIDEO 6

SET UP YOUR CLOSE BY QUOTING NUMBERS THE RIGHT WAY

Set Up Your Close via Quoting Numbers!

How pros handle numbers!

VIEW VIDEO ▶

<https://vimeo.com/1128977800/9d2fb633ea>

VIEW QUIZ:

You can make your life a lot easier or tougher by how you quote and justify your prices on all your products and accessories.

The best make it a habit... a discipline really... of quoting the list prices on all items and justifying how the product is worth that... long before quoting any specials or discounts.

If you have fallen into the habit of quoting the absolute lowest price right away (and many have)... change that and make it your mission to justify why the product is worth the high number. That is your job... 'to quote list and justify list.'

Then, you can emotionally entice a quicker decision or close via disclosing any specials that you are offering at the right moment to give your customer a reason to buy today.

VIDEO 7

CLOSE VIA BETTER CHECK-INS

Close via Better 'Check Ins'

How to increase clarity, and boost your confidence to 'Close'

VIEW VIDEO ▶

<https://vimeo.com/1128977848/a6ec40a82e>

VIEW QUIZ:

When you are presenting, you will increase your chances of closing the sale if you 'close as you go'... using check in questions to see if the customer is liking what is being presented.

These 'check-in' questions are invaluable... but these should be used in a thoughtful and earnest way. In other words, as you check to see if the customer sees the benefit of our Fresh Water salt system for instance, **you should be honestly checking to see if they see the benefit**... ready to discuss further whatever answer they may give you.

These 'check- in' questions are your opportunity to break from presenting and engage in an **honest dialogue with your customer**... instead of the typical sales monologue that most encounter in a typical hot tub retail store.

These check in questions come in many forms, such as:

- 'How is all this sounding to you so far?'
- 'Would that have value to you?'
- 'How are we doing so far on this particular hot tub model?'
- 'I know you had some concerns, how did I do answering those?'
- 'What are your thoughts on this seating layout?'
- 'Now that I have shown you how this works and what it does for you... what are your thoughts on our FW Salt System?'
- 'Is this making sense?'
- 'So how comfortable are you with this particular model... the features... and the price?'

These questions can also help the customer engage with you during presentation and make the entire experience fun and inclusive for them... you can help them really feel that their opinion is valued and help you build trust.

Remarkably, these check in questions can be one of your most powerful closing or decision helping techniques as you strive to increase your own closing ability.

VIDEO 8

CLOSE VIA SWITCHING TO OWNERSHIP MODE

Close via 'Switching to Ownership'

VIEW VIDEO ▶

<https://vimeo.com/1128977889/391d2cbabf>

VIEW QUIZ:

One of the bad habits that you will want to avoid if you wish to increase your closing skill, is the habit of **over-presenting**. This is common and since our products are so feature packed... easy to do. The untrained simply continue to present and present and present until the customer says 'enough'... usually with a request for a card or brochure.

The technique veteran sales pros use is to **know how and when to 'stop and switch' to ownership mode**.

This occurs when you sense the hot tub you have landed on and presented is 'checking all their boxes' and you **purposefully stop** presenting... and simply **switch** to the final things to show or choose or discuss that assumes the customer is now ready to purchase.

This can include discussions about their site, their access for delivery, their color choices, accessory choices etc.

This is an assumptive technique where you move the customer past the decision on the hot tub... and onto the final miscellaneous things to discuss or choose **to wrap up the entire purchase**.

Make this a habit in your presentation... and you will find your close much easier.

VIDEO 9

ASKING FOR THE BUSINESS

'Asking' For The Business

It's our responsibility to make this simple for our customer!

VIEW VIDEO

<https://vimeo.com/1131045977/33faa7f460>

VIEW QUIZ:

If you are new to sales, and perhaps even if you are not... possibly one of the easiest ways to increase your closing ability is to intentionally **ask for the business** once you have landed on a hot tub and the customer is liking everything about it.

This technique occurs 'spa side' and usually follows a set up question or statement such as:

- 'It seems like this is checking all your boxes....'
- 'I'm sensing you are comfortable with everything...'

Followed by a simple close such as:

- 'Shall we get one ordered for you?'
- 'Would you like to go ahead with it?'

The fact is, many times the question does not get asked... and the close never occurs... even if a quote is written later. **Simply put, some customers just need to be asked...** to be put in the drivers' seat of the decision.

It is our job to ask at the appropriate time. Intentionally doing this regularly... if you are not already ... **will definitely help you close more sales.**

VIDEO 10

WHEN THEY HESITATE... SIT AND QUOTE

When They Hesitate - 'Sit & Quote'

VIEW VIDEO ▶

<https://vimeo.com/1128977943/370f6f8317>

Sometimes the close occurs 'spa-side' with a simple request for the business. But often it does not, and the customer hesitates and we have to have a strategy for that.

The best have learned that it is not a good idea to press the customer on why they are hesitating right away 'spa-side'... but instead to take a beat and use the hesitation as a reason to sit and get a full quote on the purchase for them to take with them for review.

The transition may sound like this...

"I understand. But since you are considering it **let's get you a full quote with all the details so you can leave today with all the specifics...** it just takes a minute.' (Then you move to your 'Sit and Quote' area.)

This 'sit and quote' strategy — post customer hesitation — can dramatically increase your chances of closing for many reasons.

First, physiology teaches us that customers who are seated are much more relaxed, focused, and open to discussion **when they are seated** at the time of a potential decision

Next, via a complete quote process and review of all items priced out and included, you, as a sales pro... have the opportunity to 're-sell' 'clarify' and 'dialogue' with your client and assess if there are any hidden objections or hesitations you can discuss with them.

Often during this moment, if your customer begins to engage with you, they will open up about any reasons for hesitating, and you very well may have the ability to ask for the sale a 2nd or even 3rd time. This may well be the time the customer engages you with questions about financing options or even further price negotiation.

The point is, all of this is great... and **if you are intentionally sitting and reviewing the quote, even with a hesitant customer... you are increasing your chances of closing the sale** as soon as possible!

VIDEO 11

QUOTE IT BETTER, CLOSE IT BETTER

Quote it Better - Close it Better

How to write a quote that actually helps you close the sale.

VIEW VIDEO ▶

<https://vimeo.com/1128977981/ad8a25e039>

VIEW QUIZ:

The sit and quote process involves more than just printing out a quote for your customer and handing it to them.

Instead, **the best have learned that a careful, 'slowed down' walk-through of all the items in the quote with your client is the best strategy.**

This involves making sure the customer information is complete and accurate (ensuring lead capture) and the hot tub, accessory pricing is thoroughly discussed and understood, and your client knows exactly what is included, and what is not.

Be careful here. At times sales pros who have been through this process hundreds of times—move too quickly through the quote explanation... even skipping over bits of information. This can cause the client to become confused or uncertain... increasing the hesitancy with deciding on the spot.

So, the best technique is to **proceed through your quote deliberately**, engaging and having a dialogue with your customer. And as you proceed... **welcome discussion...** since that is usually a sign that the customer is close to a decision and may just need to be asked again... or given a quiet moment to think... before moving forward with the order.

VIDEO 12

WHEN THEY HESITATE - HANG IN THERE!

When They Hesitate - Hang In There!

After quoting... they may hesitate. It's our job to slow things down, and just hang in there.

VIEW VIDEO ▶

<https://vimeo.com/1128978075/1424d8746c>

VIEW QUIZ:

When proceeding through the quote process... customers may disclose an objection or concern you have not discussed on the showroom floor.

This is actually a positive sign since it gives you a chance to discuss and possibly solve their concerns right now... vs later. In fact, this is one of the many reasons we encourage this 'sit and quote' process. It can give you more time with the client to just 'Hang in There' as they weigh the decision.

It is important that at this point you do not give up on the sale, nor try to force or push the decision. Instead, a relaxed discussion about whatever is holding your client from moving forward is the best technique.

They may have concerns about:

- The Salt System and what they have heard from competitors
- The overall price of the hot tub
- Their area/deck/patio
- A competitive model they are considering

Regardless of their concern or hesitation... **the best technique is to just casually and intentionally 'hang in there' with the client by having an honest and transparent discussion about their concerns...** understanding them and discussing solutions or justifications.

The best in this business at closing the sale are very smooth at this stage, and it can be practiced and taught and improved if you just understand the principle... if they hesitate... just hang in there... and your chances of closing the sale will improve dramatically.

VIDEO 13

FINAL WORDS

"The Bigger Picture" - Course Summary

Your Course Wrap Up!

Thank you for being part of this program. We hope you've found it insightful. More than ever, **now is the time to practice and personalize these skills**. When you put them into play, know that you'll not only positively impact your success, but also the experience of your customers!

As always... **please reach out and share your stories, and suggestions**. We look forward to hearing from you.
